

Ruby on Rails Developer (Deutsch or English)

PressMatrix is a technology start-up with a simple mission - Helping publishers to deliver their magazines to tablets and mobile devices.

Working with PressMatrix, publishers can automatically convert existing print content (i.e. a regular PDF) into interactive tablet magazines, and enrich it with multimedia content like videos, games, widgets and interactive graphics. Within minutes an application for iPad and Android is generated and PressMatrix takes care of everything – hence the publisher can focus on what they are best in: to create great stories to update the world on the latest and greatest news.

Located in the heart of Berlin (fantastic office!), PressMatrix is the latest venture of a team of passionate entrepreneurs; which have successfully built and ran start-up's for the last 10 years.

Overview

Is it you, a member of the rare species of Ruby on Rails developers? And you're interested in working in an international, young team with a passion for compelling, functional and easy to use interfaces? Yes, yes, yes? It sounds like we're the perfect match then, so let's have a look at it.

Responsibilities

- Development and optimization of our existing ePublishing platform
- Integration of 3rd party service provider via Web-APIs
- Ensure the reliability and efficiency of the web-application.
- Work in a dynamic team oriented environment using agile methodologies.

Experience

- Minimum 2 years experience in developing web-based Ruby on Rails applications
- Experience with MySQL / SQLite / XML / JSON / HTML
- Basic knowledge of RESTful-API's
- Basic knowledge on development and usage of software tests
- Experience with agile development methods (Scrum, XP, Kanban ...)

Compensation

- Your workplace comes with a smartphone, and a MacBook Pro just waiting to be yours.
- Additionally you can participate in the success of the company via company stock options!
